shower waste pump

## Quiet, unblockable & maintenance free

Primo, the quiet and unblockable shower waste pump, which is maintenance free and requires no servicing, can be installed in the bathroom, horizontally or vertically if necessary, with the control unit box fitted remotely from the pump.

This silent pumping system has been specifically designed to remove waste water from the shower tray or wet floor area, to the waste pipe where there is no direct access to a ground level drain. Primo will easily cope with hair, shower gels and small obstructions that would normally cause a blockage.

Designed for the special needs and domestic market to meet the requirements of specifiers, installers and users. Noticeable reduction in sound output virtually eliminates noise disruption in the bathroom compared to other pumps.

- Fitted with 40mm outlet and inlet. Supplied with 2 connectors to reduce down to 22mm
- Significant reduction in noise when operating compared to other pumps
- Self priming, 24 volt pump
- For optimum performance use with 22mm pipework or larger
- Maximum drainage 12 litres per minute
- Not handed for quick and simple installation
- Single speed control box, IP65 rated, can be located inside or outside of the bathroom
- No non-return valves required
- Suitable for electric and mixer showers. Flow switch should be installed within the cold water supply, and can be fitted horizontally or vertically
- Easily adjustable start time delay and run-on
- 2 year warranty. Extended 5 year warranty available on request (Warranty based upon correct installation and appropriate application)
- Complies with BS7671
- Link directly to a Mira Advance ATL Flex Extra or Redring Selectronic WP Plus, eliminating the need for a flowswitch
- Easy to install and set up. Comes with complete fitting instructions

### FACT

Shower waste pumps create noise disturbance when operating and require servicing to ensure a prolonged life span.

### FACT IS

Primo is almost silent when in use, requires no maintenance or servicing and is virtually unblockable.

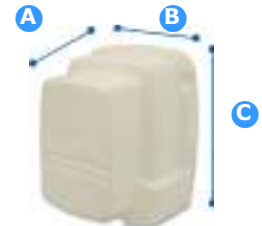

- 1 Flow switch fitted within the cold water supply
- 2 Control box and housing
- 3 To mains supply 230V
- 4 Primo Pump & Housing
- 5 22mm pipework to pump inlet
- 6 40mm outlet pipework
- 7 Waste or gully

**Control Box Housing Dimensions**

A = 80mm    B = 220mm  
 C = 165mm    D = 55mm  
 E = 145mm    F = 35mm  
 This housing velcros onto the control box lid if required.

**Pump Housing Dimensions**

A = 185mm  
 B = 230mm  
 C = 300mm  
 This housing screws to the wall.

**PRIMO CAN BE DIRECTLY LINKED TO A MIRA ADVANCE ATL FLEX EXTRA OR SELECTRONIC WP PLUS, ELIMINATING THE NEED FOR A FLOWSWITCH**

Primo pump consisting of pump, control box, flowswitch & housing. Reference **05PP01**

Primo pump with Pump Kit 'A'. UPSW-3-22 should be used with a level access or conventional above ground tray. Reference **05PP01A**

Primo pump with Pump Kit 'B'. USG1-WH should be used with a floor former. Reference **05PP01B**

Primo pump with Pump Kit 'C'. CSG1 should be used when creating a traditional screeded wet floor area. Reference **05PP01C**

Primo conforms to the requirements of the EC Low Voltage Directive 73/23/EEC (amended by 93/68/EEC)

For optimum performance install Primo no higher than 400mm from the top of the shower waste to the underside of the pump body
