

Fitting Instructions Window Kit

Parts List:

- 1x 1500mm Straight rail
- 2x Ferrules
- 2x Fixing Screws
- 2x Screw head covers
- 2x Rawl Plugs
- 2x White end caps
- 1x 1500mm of curtain rail infill extrusion
- 1x T Piece
- 4x Nylon rivets plus 4 spare
- 1x 5mm Drill bit for nylon side fixing
- 1x 1400mm drop x 1800mm striped curtain
- 1x Pack of hooks and gliders (18 of each)

**Parts No:
02WK01**

1. Trim the 1500mm curtain rail to suit the window allowing for a suitable overhang
2. Drill the rail with the drill bit provided to accept the fixing screws
3. Drill the wall to accept the rawl plugs provided ensuring the rail is horizontal (please note, rawl plugs are for solid walls, you may need alternative fixings for other materials)
4. Insert the screws through the screw head covers, through the rail, through the ferrule and into the wall
5. Attach one of the rail end covers, slide in the gliders checking to see how many eyelets are in the curtain and attach the other end cover. A dab of silicone will help retain these in place
6. Attaching the T-Piece
This can either be attached to the window rail first or the main rail (not supplied as part of the kit).

To attach to the window rail or main rail:

- Position the T-piece as required
- Mark the position where the two holes appear on the window rail which extends across the window and the main rail
- Drill holes in the rails with the drill bit supplied
- Push the nylon rivot body through the hole in the T-piece into the hole in the rail
- Tap in the rivet mandrel to expand the rivet body
- Repeat the process until the T-Piece is secured to both the window rail and the main curtain rail

7. Cut the infill extrusion to fit the recess in the top of the rail
